

# Septic Set

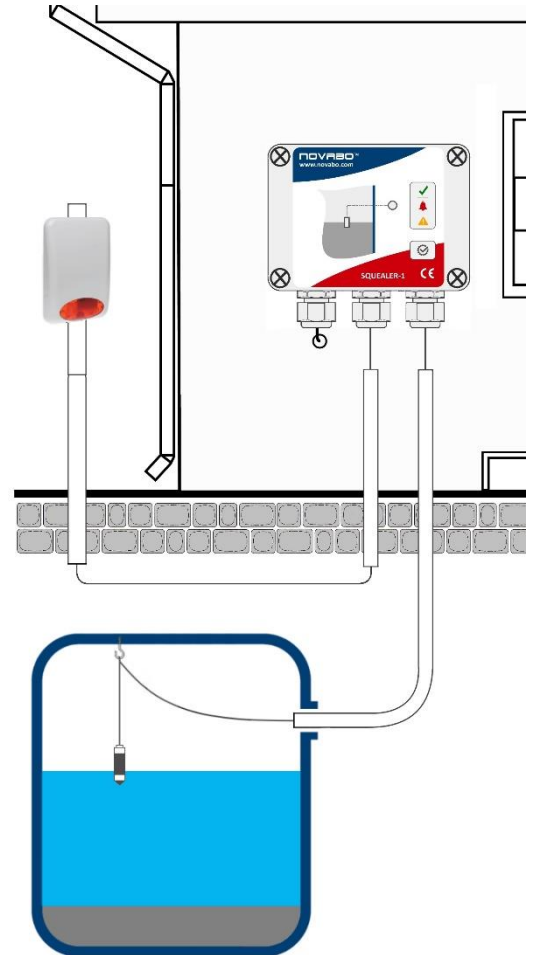

A kit for monitoring the overflow status of a septic tank or other tank with dirty liquid, rainwater or drinking water.

This system is a complete kit that allows the siren to be buried in the ground or attached to the wall.

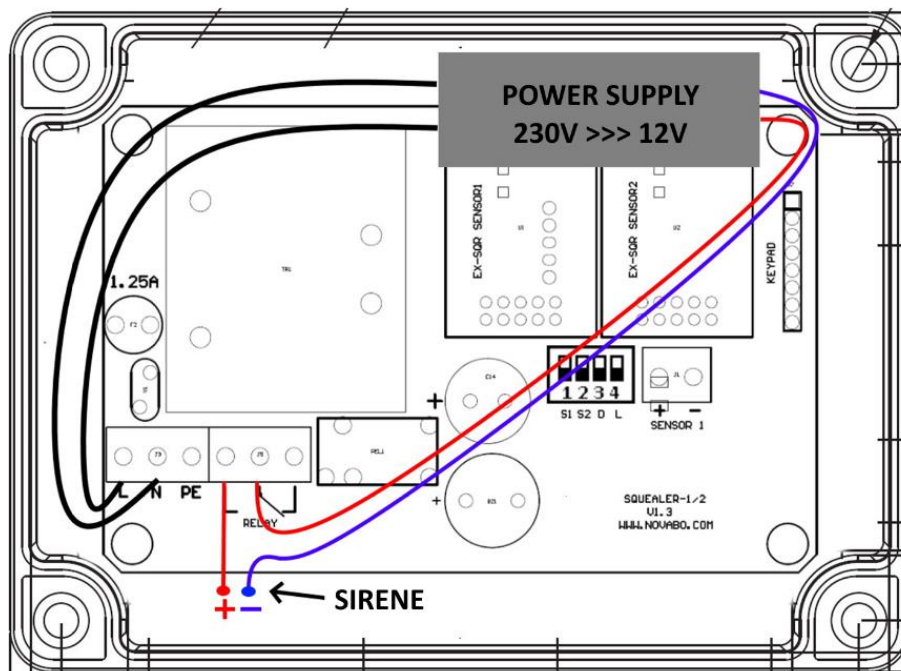

## Contents of the package

A set containing a level controller SQUEALER-1 with an acid-resistant probe OILER, a plinth to be buried or embedded in the ground and the optical-acoustic siren.

## How to connect the siren
